

ResponderSync™

Make Assignments in One System, One Time

ResponderSync™ is the first information system that seamlessly links your team members and shares assignments across multiple systems.

One Sign-On Syncs 5 Essential Systems:

- Medical devices
- EMR
- Mobile phones
- iTV
- RTLS

There's a pain point for clinical users, recognized or not. Every day, every shift, clinicians have to make patient assignments in many systems. That step drives what patients they need to chart on, how many patients they are caring for and their acuity, and contact info if there is a result in or a physician call. Nurse call is not an exception; it uses this association to route events to the nurse or tech for each patient directly to staff's mobile phones, and present this information to the Unit Secretary to triage patient calls from the desk to the assigned clinicians. For years, clinicians have been required to do this assignment manually many times, every day.

ResponderSync™ Removes the Extra Steps

The ResponderSync interface enables any assignments made in the Responder 5 system to be shared with other systems — automatically, real-time, all day — without manual intervention. Created in cooperation with industry leaders, the patent-pending interface ensures that specific portfolios of systems are eligible for this time-saving integration.

ResponderSync removes silos of information and breaks down walls between systems. Part of the Rauland Responder nurse call, ResponderSync helps ensure that the information needed is shared across systems to make patient care the best it can be.

Single Source of Truth for Assignments

Deciding which system is the one system that has all of your assignments is a decision unique to each hospital.

All of the variables need to be considered and integrated — departments, staff, patients, non-patient areas, specialized teams, routing and escalation, support staff, including non-clinical, and many more.

Mobile Devices

Connecting the mobile devices that clinical and support staff carry to the systems that have vital clinical information is a necessary part of today's workflow. With ResponderSync, there is no need for a nurse to log into different systems with their name and phone extension for the day. They do it once and get on with their shift.

Location Systems

Considerable time and money has been invested in the location infrastructure to automate workflow. But asking staff — clinical, support, physicians — to tell a computer which badge they are carrying takes time and attention, each shift, each day. ResponderSync shares this information from one system to another to get more out of the location solution.

EMR

EMR is the source of truth for patient encounters. It gathers and collates data to help caregivers make the best clinical decisions, and requires a common piece of information — what nurse is going to chart on this patient today. Responder 5 not only has the nurse, but the aide, tech, transport, housekeeper, Radiology tech, ED RN and countless others in the system.

Interactive TV

Part of providing patients with an excellent experience may include an interactive in-room TV system that brings entertainment, education and information about their stay right to the patient. Now, a patient can become familiar with staff by seeing their picture and reading their name and role. By knowing who their assigned care team is for the shift, they become less confused and more comfortable with their stay.

Medical Devices

Patients commonly have various medical devices associated with them throughout their stay - pulse ox, BP cuffs, telemetry. Each one of these devices benefits from knowing who the nurse or tech is that is taking care of the patient. With this information, devices can route critical alarms to the mobile phone assigned to the staff. By sharing the assignment from Responder 5, repetitive, oft-forgotten steps are eliminated and staff are notified appropriately.
